

Architectural Perforated Metals

Here's something
for nothing.

Add more value
than cost.

Take action.

We've seen a lot of ways to make the most of perforated metals in stunning architecture; we've also seen what's best avoided.

Here are a few tips from first hand experience.

1. Design to material girth and sheet length. We can help you design your panels and patterns to get the best yield from the materials available.
2. Choose the best material for the application. Too heavy and the material and installation costs can blow out. Too light and it won't sit flat or last the test of time. But you don't need to be an expert in this – that's another way we can help.
3. If you like to reduce risk in a project and ensure on-time completion, don't try and punch holes that are the same thickness or less than the material size, eg. a 3mm hole in 3mm aluminium. Risk of delays and failure are higher and so, it naturally flows, are the costs per m². You may have guessed by now, we can help you design a panel that can be made practically. We're not afraid to push the envelope – but we also know when it's busted – before it costs the project time and money.
4. Don't limit yourself to stock patterns. With a little imagination and planning, we can help you create a distinctive look and feel for any project, in a way that adds much more value than cost.
5. It's all about time. Great individual designs can be created using existing tooling. We can help you put your own signature on a project using existing tooling that saves both time and money – especially if it's a rush job.

We all ask the same questions. How can I add the greatest value? How can I achieve the best design outcome at a price that will survive QS unscathed?

At Action Sheetmetal & Roofing, our answer to these questions is to provide design advice and assistance as early as possible in a project, to deliver projects in a compressed timeframe at a high quality that is fairly priced.

While there are other companies who supply perforated metal, very few will assist in the design and fabrication of the complete façade or screening. We understand the process, from design through installation and ongoing maintenance. We care about the product we produce for its lifetime, and the benefit that users will experience.

Our focus and purpose is to help make a better Australia. We're passionate about supporting and growing Australian design and manufacturing, and recognise that we are one link in a long supply chain. Everything we do is to improve someone's quality of life – no matter how simply.

We're helping make a better Australia.

Through partnerships and our relationships, everything we do is to improve someone's quality of life – no matter how simply.

Established in 2001, Action Sheetmetal & Roofing is a family owned and operated business that specialises in custom sheetmetal fabrication. Located on the Gold Coast, we supply fabricated products along the eastern seaboard and Darwin. With a focus on quality, our long term team take pride in providing great service and products for our customers – many of whom have been with us since 2001. Along with our custom fabrication, we can also help with metal roofing and rainwater goods.

Please call us to see how we can help you deliver your project.
